Detailed feedback on your submission of assessment 2 in COMP 213

Thank you for submitting your assessment. Your efforts are highly appreciated!
The grades for each of 5 categories are best / great / good / ok / poor. Hopefully
the detailed comments below will help you submit a better assessment next time.

Assessed features: examples	grade	comments: what to improve in the code
Program structure and compilation: no warnings or notes, easy and helpful hints for the user.	Best	Great work!
Client: connect to a server, pass the user's input to the server, display replies from the server. Server: listen for connections, accept multiple clients, respond to client commands, broadcast client messages to all clients.	Best	
The code good Javadoc comments: all classes, methods, fields are described well.	Best	
Exceptions are handled well: caught and reported to the user.	Best	I particularly like the exception count on the Server
Advanced features, e.g. clients are asked for the server's address and allowed to chat with a unique username, can ask for available commands, server/client times, number of clients; the server handles quit requests, unrecognisable input, informs all current clients about new (dis)connections etc.	Best
